understanding**

MARY: the engine
learns to predict the whole-brain response to any stimulus
and to tell the shared, average response apart from each person's own
= a predicted brain (a reading across 20,484 points on the cortex)

Mary improves
so the whole
product improves

QUALIA: the understanding layer
reads the predicted brain into plain language (which networks engaged)
personalizes it to a specific individual · stays honest about what it can know

NEUROSIGNAL: the read-out layer
reward · attention · emotion · Manipulation · Sycophancy · Buy / Sell
a live, second-by-second brain · flags when it cannot measure something

Applications: neuro-marketing · AI-safety auditing · personalized AI · clinical & BCI · governance
